SORGENTE
Lenci design

SORGENTE: water without boundaries.

Free from specific functions and spaces, water becomes the generator for aesthetic appeal and sensory emotions.

Free of artifice, the water's beauty flows from the heart of the tub full of life, creating a continuous movement.

Affording a unique experience of both sight and sound: water in the simplicity and beauty of natural springs, the gentle and silent flow of its movement.

With Sorgente the boundary between water and surfaces becomes imperceptible. It has a dual effect: water is the absolute star of the stage and the tub blends into the surroundings completely.

SORGENTE Lenci design

The multi-sensory experience afforded by Sorgente can be enjoyed in pairs too, at any time; as a matter of fact, the tub is always full and ready for you to immerse yourself.

A deeply regenerating bath because

- _ contact with Sorgente's slightly salty water is extremely pleasant on your skin and recreates the feeling of being in the sea (S02 continuous use version).
- _ the tub is very deep and water reaches the rim, where it overflows; the water covers your entire body.

The whirlpool is super silent thanks to Hydrosilence, the new noise reduction system, leaving plenty of room for the pure sound of well-being: that of flowing water.

The technology used is designed to simplify and speed up tub use, while remaining invisible to draw attention to the beautiful design and let water play the starring role.

CUSTOMISATION AND SIMPLICITY: A UNIQUE RESULT

The setting surrounding Sorgente and of which the tub becomes an integral part can be customised very simply to meet your specific needs.

Indeed, simplicity is the key word used to describe the inset and covering system designed by Teuco: based on panels that cover the area around the bathtub, which can all be removed to make installation easy and to allow for maintenance work to be carried out.

Each element can be covered, as requested, with any material you desire to ensure complete continuity with the surrounding setting. Covering materials from the Teuco range are also available, both in stone and in wood. The oasis of relaxation created by Sorgente is unique and unrivalled.

SORGENTE, A PLEASURE TO EXPERIENCE

The unique Sorgente experience can be enjoyed any time you like. The recycling system collects the water overflowing from the tub's rim and filters it; the heater keeps the water temperature constant. The tub can be chosen to suit your needs: in the continuous use version, with the tub always full (S02) or in the version to be filled and emptied any time you want (S01), both with or without super silent whirlpool and with the automatic filling system as an option.

_Sorgente S01: traditional use version

Sorgente can also be chosen in the version designed for more occasional use, if the tub is not used for a prolonged length of time. In this case, the traditional manual method is used to sanitise the tub. All the other exceptional characteristics of Sorgente remain the same.

_Sorgente S02: continuous use version

The ideal version for anyone wanting to benefit from the marvellous sight of water flowing continuously at any time and wanting to dip into it any time, without having to wait. The tub is always full, thus reducing water consumption. The exclusive salt-based Automatic Water Treatment system comes standard with the tub and resolves all your worries about sanitisation. In fact, the water quality checks are performed automatically thanks to two sensors which read the chlorine and pH levels in the water and keep them within the correct limits.

If the tub is not used for an extended period of time, simply make sure that the sensors are constantly in contact with the water. Moreover, the salt-based water treatment system is extremely compatible with the skin. The ensuing slightly saline water creates a "sea effect" which makes it feel even more natural and surprising as you settle into the bath.

AUTOMATIC TUB FILLING

The automatic filling function is both unique and innovative: it makes running a bath relaxing and immediate, leaving you plenty of time to enjoy a good soak.

A key on the control pad starts the water supply and stops it when the tub is full and when the water temperature reaches the value set by the user. A clever way to give you more time for well-being, when time is of the essence.

TOUCH CONTROLS

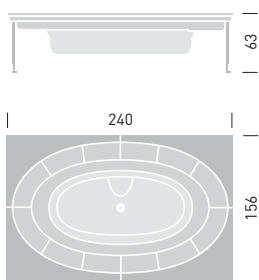

The touch controls are built into the covering: this makes it possible to ensure clean-cut lines and it enhances how the tub area blends in with the surrounding setting.

The touch control technology features a simple straightforward icon menu. The outlet spout is also a handle that makes it easier and safer to get in and out of the bath.
